

(5) 设函数 $f(x, y) = \begin{cases} 1, & 0 < y < x^2, \\ 0, & \text{其他,} \end{cases}$ 则下列关于 $f(x, y)$ 在点 $(0, 0)$ 的说法正确的有 个.

① 沿路径 $y = kx$ 极限存在; ② 连续; ③ 偏导数存在; ④ 可微;

(A) 1 (B) 2 (C) 3 (D) 4

下列 () 选项条件成立时, 能够推出函数 $f(x, y)$ 在点 (x_0, y_0) 处可微, 且全微分 $df(x, y)|_{(x_0, y_0)} = 0$.

A. $f'_x(x_0, y_0) = f'_y(x_0, y_0) = 0$

B. $f(x, y)$ 在点 (x_0, y_0) 处的全增量 $\Delta f = \frac{\Delta x \Delta y}{\sqrt{(\Delta x)^2 + (\Delta y)^2}}$

C. $f(x, y)$ 在点 (x_0, y_0) 处的全增量 $\Delta f = \frac{\sin[(\Delta x)^2 + (\Delta y)^2]}{\sqrt{(\Delta x)^2 + (\Delta y)^2}}$

D. $f(x, y)$ 在点 (x_0, y_0) 处的全增量 $\Delta f = [(\Delta x)^2 + (\Delta y)^2] \sin \frac{1}{(\Delta x)^2 + (\Delta y)^2}$

答案 选(B).

解 当 $k=0$ 时, $\lim_{\substack{y \rightarrow 0 \\ x \rightarrow 0}} f(x, y) = \lim_{x \rightarrow 0} 0 = 0$. 当 $k \neq 0$ 时, 因为 $\lim_{x \rightarrow 0} \frac{x^2}{kx} = 0$, 所以存在 $\delta > 0$, 当 $x \in (-\delta, \delta)$, 有 $|kx| > x^2$, 即 $y = kx$ 不在区域 $D = \{(x, y) \mid 0 < y < x^2\}$ 内, 从而

$$\lim_{\substack{y=kx \\ x \rightarrow 0}} f(x, y) = \lim_{x \rightarrow 0} 0 = 0,$$

故 ① 正确.

$\lim_{\substack{y \rightarrow \frac{1}{2}x^2 \\ x \rightarrow 0}} f(x, y) = 1, \lim_{x \rightarrow 0} f(x, y) = 0$, 故 $\lim_{x \rightarrow 0} f(x, y)$ 不存在, 所以不连续, 故 ②、④ 均错误.

$$f'_x(0, 0) = \lim_{x \rightarrow 0} \frac{f(x, 0) - f(0, 0)}{x} = \lim_{x \rightarrow 0} \frac{0 - 0}{x} = 0, \text{同理 } f'_y(0, 0) = 0, \text{故 ③ 正确.}$$

对于选项 D: 当选项 D 中条件成立时, 有

$$f'_x(x_0, y_0) = \lim_{\Delta x \rightarrow 0} \frac{\Delta f}{\Delta x} = \lim_{\Delta x \rightarrow 0} \left[\frac{1}{\Delta x} \cdot (\Delta x)^2 \sin \frac{1}{(\Delta x)^2} \right] = 0,$$

$$f'_y(x_0, y_0) = \lim_{\Delta y \rightarrow 0} \frac{\Delta f}{\Delta y} = \lim_{\Delta y \rightarrow 0} \left[\frac{1}{\Delta y} \cdot (\Delta y)^2 \sin \frac{1}{(\Delta y)^2} \right] = 0,$$

$$\begin{aligned} \lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} \frac{\Delta f - df}{\rho} &= \lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} \frac{[(\Delta x)^2 + (\Delta y)^2] \sin \frac{1}{(\Delta x)^2 + (\Delta y)^2}}{\sqrt{(\Delta x)^2 + (\Delta y)^2}} \\ &= \lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} [(\Delta x)^2 + (\Delta y)^2]^{\frac{1}{2}} \cdot \sin \frac{1}{(\Delta x)^2 + (\Delta y)^2} = 0. \end{aligned}$$

由可微的定义, 知 $f(x, y)$ 在点 (x_0, y_0) 处可微, 且 $df = 0$, 选项 D 正确.

对于选项 A: 由 $f'_x(x_0, y_0) = f'_y(x_0, y_0) = 0$, 知偏导数存在, 但不能推出 $f(x, y)$ 在点 (x_0, y_0) 处可微.

对于选项 B: $\Delta f = \frac{\Delta x \Delta y}{\sqrt{(\Delta x)^2 + (\Delta y)^2}}$, 当 $\Delta y = 0$ 时, $\Delta f = 0$; 当 $\Delta x = 0$ 时, $\Delta f = 0$, 故

$$f'_x(x_0, y_0) = \lim_{\Delta x \rightarrow 0} \frac{\Delta f}{\Delta x} = 0, f'_y(x_0, y_0) = \lim_{\Delta y \rightarrow 0} \frac{\Delta f}{\Delta y} = 0,$$

由此可知

$$\lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} \frac{\Delta f - df}{\rho} = \lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} \frac{\Delta x \Delta y}{\sqrt{(\Delta x)^2 + (\Delta y)^2}} \cdot \frac{1}{\sqrt{(\Delta x)^2 + (\Delta y)^2}} = \lim_{\substack{\Delta x \rightarrow 0 \\ \Delta y \rightarrow 0}} \frac{\Delta x \Delta y}{(\Delta x)^2 + (\Delta y)^2}$$

不存在, 即 $f(x, y)$ 在点 (x_0, y_0) 处不可微.

对于选项 C: 由于 $\Delta f = \frac{\sin[(\Delta x)^2 + (\Delta y)^2]}{\sqrt{(\Delta x)^2 + (\Delta y)^2}}$, 且

$$f'_x(x_0, y_0) = \lim_{\Delta x \rightarrow 0} \frac{\sin(\Delta x)^2}{\Delta x} = \lim_{\Delta x \rightarrow 0} \frac{\Delta x}{\Delta x} = 1,$$

故 $\lim_{\Delta x \rightarrow 0} \frac{\Delta x}{|\Delta x|} = 1, \lim_{\Delta x \rightarrow 0} \frac{\Delta x}{|\Delta x|} = -1$, 从而 $f'_x(x_0, y_0)$ 不存在. 同理 $f'_y(x_0, y_0)$ 不存在, 故 $f(x, y)$ 在点 (x_0, y_0) 处不可微.
